Our intention for user testing was to introduce the user to all the features of our program. We wanted to learn as much as we could about our application. We needed to know the application's strengths and weaknesses. A test route was made to ensure the user tested the critical features and capabilities. Fortunately we deployed our application so this means that users can use Expo+ from their own homes. We chose 11 people that showed interest in the project idea for this testing.

Test Route:

- Search up expoplus.vercel.app on your desired browser
- Click on get started and register an account
- Login with that account
- You will be introduced with a preference page please enter your program, technology and area of choice and submit.
- Browse through the initial recommendations your are produced with
- Feel free to click through the different courses on the side bar
- Highlight projects you find interesting and wish to attend to

- For any random project click the “visit on map” button.
- Click on the map link on the nav bar and click on any lab you wish to attend to first.
- Browse through the projects you have highlighted and consider leaving a rating for the project (since you're actually not visiting the project you can rate it based on the project description)
- If users wished to further explore/use the program they were free to do so.

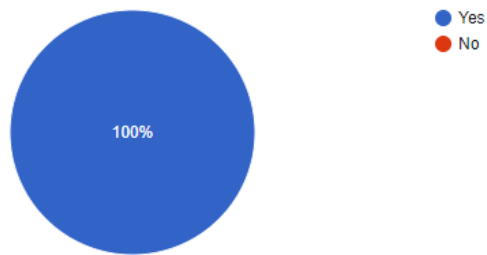

Questions and Answers

I understand the information provided in relation to data protection
